## Using Lean System Engineering

Add Value to your customers,

Eliminate Inefficiency in everything you do...

All companies today are on the lookout for ways to improve their efficiency and to show 'value-add' to their customers. Is there a simple and practical way of doing this in a short time? The answer is yes and it comes with success stories and years of industry experience. Lean System Engineering!

### Profile of CGenos Consultants

Post Graduates from IIT, Project Management Professional & Six Sigma Master Black Belts with International consulting experience in Fortune 500 companies in USA, Japan, Germany and Italy. Hands on experience as Quality Head and Part of Senior Management in Major IT Service Providers and Tier 1 Automotive Product Suppliers and have mentored and trained several industry professionals.

### About the Lean System Engineering Program

Lean is a scientific methodology that evolved from Japanese & American Management techniques, over a period of 30 to 40 years. It is a highly matured methodology that has been kept confidential for several years by the practicing companies. Lean has helped many in the corporate world maintain a competitive edge.

CGenos, based on the personal experience of the trainers imparts the secrets and richness of Lean to the participants.

Lean operates on sound concepts and principles and helps to reduce inefficiencies built into any system. From a customer point of view Lean adds value to the services and products. It improves logical and creative skills of the practitioners and helps them in their career. It reduces turnaround time (TAT) by 30% and improves profitability by 5 to 15%.
